He sets out to find his family and encounters many other survivors along the way.

Note: Depending on screensize, the page elements may appear differently than in the figure.

1. Begin by creating a module named **Top10App**. Attach it to the `<body>` element.
2. Take a look at the **shows.json** file. Notice it contains a JSON object containing an array of TV shows.
3. Create a file named **shows.js** in the **services** directory. Create a new service named **shows** that gets data from the shows API (the json file). Include the service as a new script element.
4. Open the **MainController.js** file, and use the **\$scope.shows** property to load data from the json file into the **\$scope.shows** property. Attach the controller to the `<div>` element with class `"main"`.
5. Back in the **index.html** file, find the `<div>` element with the class `"content"`. Uncomment the code and use the `ng-repeat` directive to loop through the shows. Look at the format of the data in the **shows.json** file and display each shows details.
